

60 Days of AI Challenge

Days 1–39 Documentation Report

Prepared by: Tarunteja Patro

Table of Contents

Introduction, Objectives, Learning Methodology, Day-wise Summary, Technologies, Skills, Projects, Challenges, GitHub Documentation, Outcomes, Future Goals, Conclusion.

Introduction

This report summarizes my first 39 days of the 60 Days of AI Challenge. Every day I generated, tested, documented, and published AI-powered HTML applications.

Objectives

Develop AI skills, strengthen prompt engineering, improve web development, and maintain professional documentation.

Learning Methodology

Studied resources, watched solution videos, generated HTML applications using Claude AI, tested them, captured screenshots, uploaded to GitHub, and shared LinkedIn updates.

Days 1–10

Focused on Claude AI basics, prompt engineering, role prompting, structured prompting, and AI workflows.

Days 11–20

Worked on practical AI applications, GitHub documentation, HTML projects, testing, and workflow understanding.

Days 21–30

Built healthcare, business, supply chain, and marketing simulators while improving application testing and documentation.

Days 31–39

Completed Media Integrity Analyzer, Marketing Detective, Prompt Puzzle, Cognitive Pattern Explorer, Task Compass, Typing Speed Studio, and PDF Splitter & Merger.

Technologies Used

Claude AI, HTML, CSS, JavaScript, GitHub, VS Code, Canva, LinkedIn, Web Browser.

Skills Developed

Prompt Engineering, Problem Solving, Documentation, Web Development, Critical Thinking, Business Analysis, Communication.
