

SmartHire AI — API Design (v1.0)

No authentication on any endpoint (confirmed out of scope in PRD). All responses are JSON.

GET /api/health

- **Purpose:** Confirm the server is running (used in Day 2 setup and deployment checks)
 - **Request:** none
 - **Response:** `200 { "status": "ok" }`
 - **Validation:** none
 - **Auth:** none
 - **Errors:** none expected
-

POST /api/upload

- **Purpose:** Upload a resume file (PDF/DOCX) and extract its text
 - **Request:** `multipart/form-data`, field `resume` (file, max 5MB, .pdf or .docx)
 - **Response:** `200 { "resumeText": "...", "filePath": "..." }`
 - **Validation:** file type restricted to PDF/DOCX; size $\leq$ 5MB
 - **Auth:** none
 - **Errors:**
 - `400 INVALID_FILE_TYPE` — wrong file extension
 - `400 FILE_TOO_LARGE` — exceeds 5MB
 - `422 PARSE_FAILED` — file uploaded but text extraction failed (frontend should show paste-text fallback)
-

POST /api/upload/text

- **Purpose:** Accept manually pasted resume text (fallback path)
 - **Request:** `application/json { "resumeText": "..." }`
 - **Response:** `200 { "resumeText": "..." }`
 - **Validation:** `resumeText` required, minimum 50 characters
 - **Auth:** none
 - **Errors:** `400 TEXT_TOO_SHORT`
-

POST /api/analyze

- **Purpose:** Run full AI analysis (ATS score, suggestions, interview questions, readiness) and persist the result

- **Request:** `application/json { "resumeText": "...", "candidateName": "...", "filePath": "..." (optional), "resumeFilePath": "..." (optional) }`
 - **Response:** `201 { "id": 12, "candidateName": "...", "atsScore": 78, "atsBreakdown": {...}, "resumeSummary": "...", "strengths": [...], "improvementSuggestions": [...], "interviewQuestions": [...], "interviewReadinessScore": 74, "analysisDate": "..." }`
 - **Validation:** `resumeText` required, minimum 50 characters
 - **Auth:** none
 - **Errors:**
 - `400 MISSING_RESUME_TEXT`
 - `502 AI_PROVIDER_ERROR` — Gemini call failed or returned invalid JSON after retry
 - `500 DB_WRITE_ERROR` — analysis succeeded but failed to persist
-

`GET /api/analysis/:id`

- **Purpose:** Retrieve a single full analysis record (used by candidate Results page and recruiter detail view)
 - **Request:** URL param `id` (integer)
 - **Response:** `200 { ...full record... }`
 - **Validation:** `id` must be a valid integer
 - **Auth:** none
 - **Errors:**
 - `404 NOT_FOUND` — no record with that id
 - `400 INVALID_ID`
-

`GET /api/candidates`

- **Purpose:** List all analyzed candidates for the recruiter dashboard (lightweight fields only)
 - **Request:** optional query param `limit` (default 50)
 - **Response:** `200 { "candidates": [ { "id", "candidateName", "atsScore", "interviewReadinessScore", "analysisDate" }, ... ] }`, sorted by `analysisDate DESC`
 - **Validation:** `limit` must be a positive integer if provided
 - **Auth:** none
 - **Errors:** `500 DB_READ_ERROR`
-

(Stretch, only if built) `POST /api/recommendations`

- **Purpose:** Generate job role recommendations from resume text
 - **Request:** `application/json { "resumeText": "..."}`
 - **Response:** `200 { "recommendedRoles": [...] }`
 - **Validation:** `resumeText` required
 - **Auth:** none
 - **Errors:** `502 AI_PROVIDER_ERROR`
-

Error Response Format (standard across all endpoints)

```
json
{
  "error": {
    "code": "PARSE_FAILED",
    "message": "We couldn't read that file. Please paste your resume text instead"
  }
}
```
